

# NEWS: DOOR ARMOR BY FIRE DOOR SOLUTIONS ANNOUNCES TECHNOLOGY PARTNERSHIP WITH SINGLEWIRE

Posted on June 13, 2018

## DEFEND AGAINST ACTIVE SHOOTERS

Door Armor by Fire Door Solutions, developer of the complete active barricade solution, and Singlewire Software, a leading emergency mass notification service provider, are partnering to provide organizations with safety solutions to defend against active shooters. Door Armor has created a door barricade that keeps intruders out and sends an InformaCast mass notification when activated. Through this technology partnership, Door Armor can now provide Instant-upon-Actuation notification to all specified notification speakers, and building, district, and first responder personnel. Door Armor is also breachable from outside the door in case the threat is inside a classroom or in case of misuse.

Singlewire Software develops InformaCast emergency notification software that is used in K12 schools, higher education facilities, manufacturing, businesses, healthcare and more. It sends messages to on-premises and mobile devices to keep people safe and informed. Singlewire has worked with Door Armor to develop a means to trigger messages when the Door Armor active shooter barricade is deployed.

## NEW WAYS TO PROTECT AND INFORM

“At Door Armor, we’re focused on delivering a simple, effective tool that can keep people safer,” said Donnie Thomas, President of Door Armor. “By partnering with Singlewire, we’re able to combine the power of physical and virtual safety tools into one powerful solution.”

Pat Scheckel, Executive Vice President of Product Management and Marketing for Singlewire Software said, “Our partnership with Door Armor will give our collective customers new ways to protect and inform their people about serious threats.”

The solution is available now for purchase through Door Armor, with the first customer implementations scheduled for July 2018. To learn more about Door Armor and its barricade tool, visit [www.firedoorarmor.com](http://www.firedoorarmor.com).
